Poinsettias: Tips Before You Go to Final Spacing

August 2008

Make it easier on yourself and reduce your worries! Before final spacing of your poinsettia crop, be proactive to prevent disease and insect problems.

- **Root Diseases:** Drench with [PlantShield® HC](#) to prevent root diseases. One drench using 4 oz/100 gal. (or 2 oz/100 gal. for re-treatment) will protect your plants for up to 12 weeks.
- **Insects:** Keep your poinsettias clean of insects. Use [NemaShield™](#) for fungus gnat control. One unit of NemaShield, containing 50 million nematodes, will treat 800-1200 sq.ft., eliminating damaging fungus gnat larvae. [BotaniGard®](#) controls the early stages of insects such as whiteflies, preventing population flare-ups after you've gone to final spacing.

Do all you can to ensure a stress-free environment and provide your poinsettias with the best conditions to thrive before shipping.
