

BioWorks® Bulletin

Info To Grow

September 2008

Don't Leave Your Bulbs Alone In The Cold!

Allow your basal and stem roots to grow to their full potential:

Protect bulb crops like Lilies, Tulips, Gladiolus and Narcissus. Mix RootShield® Granules into your potting mix, or use PlantShield® HC (wetable powder) as a drench or bulb dip. Both products actively attack pathogens like *Pythium*, *Fusarium* and *Rhizoctonia*, preventing them from damaging the root system. Healthy roots lead to healthy plants!

Untreated Lily Lily Treated with
Lily RootShield Granules

There are several ways to get great results:

- PlantShield HC can be drenched after potting-up at 4 oz/100 gal.
- RootShield Granules can be incorporated at 1.25 lbs/cu.yd. in your media
- PlantShield HC can be used in your bulb dip at the rate of 8 oz per 20 gal. (provide constant agitation for complete coverage)
- PlantShield HC can be dusted onto bulbs at a rate of 1/2 to 1 lb per 100 lbs of bulbs.
